github.com/rohan-ahire1

Full-stack engineer with 3 years shipping SaaS products in TypeScript, React, Node.js, and Python: billing and payments, creator-commerce platforms, data pipelines, and AI tooling (MCP servers, LLM agents). I own work end to end, across US time zones.

Work Experience

Software Engineer II | **Pattern** **Oct 2025 – Present**

Pune, India · Hybrid · Promoted from SE I; scope expanded to cross-functional product ownership and platform-wide initiatives.

- Built an AI error-triage pipeline on Elasticsearch that classifies bugs daily, files Linear tickets assigned to engineers by commit history, auto-raises PRs for simple fixes, and writes investigation reports for complex ones.
- Built a read-only database MCP server, used by many engineers on the team, giving AI agents (Cursor, Claude Code, Codex) guarded access that blocks any write, for much faster backend debugging. Also shipped an MCP chat over core product tables so support staff can investigate incidents on their own.
- Built the end-to-end creator management system for Pattern's acquired NextWave company, onboarding **1,200+** TikTok retainer creators into the CRM with contracts, commission structures, video delivery tracking, and payments.
- Led the self-serve onboarding revamp, enabling signups without sales involvement for the first time. Delivered full-stack: Shopify connection, social handle verification, payment extraction, and Salesforce integration for lead follow-up.
- Led research into the TikTok halo effect on Amazon/DTC sales across **70+** brands (**$3M+** monthly TikTok GMV) using lag and correlation analysis; worked with the AI team to ship a product feature from the findings.

Software Engineer I | **Pattern** **Sep 2023 – Sep 2025**

Pune, India · Hybrid

- Architected the billing system (billing cycles, usage credits, plan upgrades, commission rules) and payment surface: ACH, Plaid and Modern Treasury microdeposit verification, and Stripe, for **48+** paying brands.
- Built the commission system full-stack, with percentage and flat-rate structures and dynamic rules based on ambassador sales goals and monthly performance, for **67,000+** ambassadors across **50+** brands.
- Cut query time from **~60s to 0.5s** with targeted indexes; led a zero-downtime Meta Graph API v20→v23 migration.
- Fixed multi-timezone data errors in the reporting pipeline for **50+** client brands by rewriting the cron scheduler's SQL.

Projects

Recoup | Collections SaaS for small unpaid invoices · Next.js 15, TypeScript, SQLite, Stripe, Twilio, Claude API · recoup.rohanahire.com

- Built the reminder engine as a pure function of case, history, and clock; it stops on payment, reply, promise, or dispute.
- Integrated Stripe Checkout with payment plans, Twilio SMS with signed webhooks, Resend, CSV import, and Claude to read replies.

Pointer | Interactive coding-interview course · Next.js 16, React 19, TypeScript, Remotion · pointer.rohanahire.com

- Teaches 15 interview patterns with Remotion-animated explainers and step-through visualizers that run the real algorithms.
- Static Next.js export with ⌘K search, local progress with export/import, mobile layouts, and a typed, Vitest-tested content model.

Scoutline | AI lead-research engine · Node.js, Express, React, SQLite, OpenAI, headless Chrome

- Discovers local businesses, crawls their sites for verified emails, and scores leads with a rule engine plus LLM screenshot review.
- Runs as separate web and worker services with a job queue (idempotency, backoff, timeouts) and nightly systemd-timer discovery.

Multibagger | Stock research platform and live paper trading · Python, DuckDB, Parquet, systemd

- Built a backtesting platform on versioned NSE data with walk-forward and holdout tests to reject overfit strategies; survivors run as daily paper-trading books on a VPS.

Education

PG Diploma in Advanced Computing (PGDAC), CDAC Pune **2023**
B.Tech. in Mechanical Engineering, University of Mumbai **2018–2022**

Technologies & Skills

- **Languages:** TypeScript, JavaScript, Python, Rust, SQL
- **Frameworks:** React, Next.js, React Native, Expo, Node.js, Express, Elysia, Bun, FastAPI, Vite, Tailwind CSS, Zustand
- **AI:** MCP servers, LLM agents, OpenAI API, vision-model evaluation, Claude Code, Codex, Cursor
- **Databases:** PostgreSQL, MySQL, SQLite, DuckDB, TimescaleDB, Elasticsearch
- **Infra & Tools:** Docker, AWS, Linux, Caddy, systemd, GitHub Actions, Jenkins, Drizzle ORM, Git, Figma, Postman
- **Integrations:** Stripe, Plaid, Modern Treasury, Shopify, Meta Graph API, Salesforce, Linear, REST APIs, Webhooks

Awards

- Finished **5th** of **60+** global teams in Pattern's Innovation Cup (2026) with a livestream intelligence platform for TikTok and Douyin; led shop and livestream metrics (GMV, GMV per minute, product sales, performance).
- Placed **4th** in Pattern's Clickwars hackathon: built a model from scratch to predict click-through rate from raw marketplace data.
